

Graduate Perspectives

Based on their exceptional understanding of technology and business, Information Systems graduates are qualified to work in all sectors of industry and are in demand worldwide. Their employment opportunities include positions in industrial and commercial corporations, software development firms, banks and insurance companies, public services, education and research, and consulting firms.

Results of the recent "Bewerbungspraxis 2013" survey show that Information Systems graduates evaluate their career prospects very positively and that they perceive a significant chance of working in their personal dream job.

"Bamberg, as one of the top universities for information systems in Germany, offers an exceptional mix of individual mentoring, internationalization and excellent performance by the different departmental chairs."

Dr. Falk v. Westarp, Country Manager, Management Consultant

Admission Requirements

The most important prerequisite for studying Information Systems is a keen interest in matters of information processing and business issues.

Furthermore, you should possess an aptitude for abstraction and conceptual work. You should enjoy working with people, be a team player and show personal initiative, as your professional life will to a large degree be characterised by productive involvement in interdisciplinary teamwork. Sound knowledge of German, English and mathematics are also a must! The Programme is mostly in German.

Universität Bamberg

Bachelor's Programme

Information Systems

You aspire to become an IT expert and help to shape the future of business?

The field of Information Systems deals with the “nervous system” of companies and other organizations in industry and public administration – it is the design and management of information systems using modern information technologies.

Bamberg’s bachelor’s programme in Information Systems, as laid out by Germany’s first faculty for Information Systems and Applied Computer Science (WIAI), offers you an education with a focus on internationality and practical expertise.

As an Information Systems graduate, you analyse and design companies’ information processes. You are the link between individual departments and the IT division. You devise flexible and effective IT-based business processes and, in doing so, help your company to maintain an advantageous position in the arena of global competition.

The Programme

The programme is based on a seven-semester model with six semesters of basic studies enriched by the extend of one semester of specialisation electives chosen according to individual interests.

The bachelor’s programme curriculum comprises topics like information systems, computer science, business administration/macro-economics, mathematics and statistics, a seminar on current issues in the information systems field and the bachelor’s thesis.

“Looking back, the methodological approaches and the well-founded knowledge in business and IT issues which I gained through my studies at the University of Bamberg made it easy for me to successfully get started in IBM’s consulting division.”

Markus Bäuerlein, IBM Consultant – Strategy & Change

“An education balanced between business and technology sets Bamberg apart and offers an excellent preparation for a successful and future-oriented career.”

Björn Münstermann, McKinsey & Company, Business Technology Office

Unique Qualities

Exceptional CHE Ranking

The 2010/11 CHE rankings awarded the Information Systems programme at the University of Bamberg the highest marks in eight of thirteen categories including “student tutoring,” “course offering,” and “overall study situation.”

Information Systems is an accredited programme and was most recently re-accredited by Acquin in 2013.

An Academic and Cultural Setting

As a university town and UNESCO World Heritage site, Bamberg offers the perfect setting for your academic pursuits. Countless local recreational and cultural opportunities, an attractive nightlife, numerous parks and the city’s comfortable size all ensure a harmonious work-life balance throughout your studies.

Internationality

We believe that preparing our graduates for a professional career in a globalised world is of the utmost importance. For this reason, the WIAI faculty is working to continually expand its international network. The vast majority of our students complete a portion of their studies abroad.
